

The CES Green Team's

TIP OF THE MONTH

**Start your own
pollinator garden!**

Did you know that climate change and our urban/suburban environments affect our food systems?

Pollinators of crops and trees (honeybees, butterflies, hummingbirds, etc.) need access to more consistent habitat across the landscape, and your yard or porch can help!

Consider replacing a portion of lawn or setting out a planter with native flowering plants!

Additional resources/links

The Green Team's mission is to center sustainability and climate justice principles within CES's policies, procedures, and operations. Additionally, we support the integration of climate justice education and advocacy into the agency's work with the diverse communities it serves.

The Green Team's next meeting is **May 6, 1-2PM**. Come join us!
